SUMMARY

AI workflow engineer who designs and ships **Claude-powered automations** for real business operations. Daily Claude Code user with hands-on prompt engineering (system prompts, structured outputs, few-shot, evals) and production workflow automation with **n8n** and APIs. Founder of a tech startup that automates customer-facing and back-office work. Computer Engineering background across software, APIs, and IoT/firmware. Strong written English and experienced at training others.

CORE SKILLS

- **Claude & Prompt Engineering:** system-prompt design, structured/JSON outputs, XML-tagged prompts, few-shot, prompt chaining, evals & output analysis, Claude Messages API, Claude Code (daily)
- **Automation & Integration:** n8n (self-hosted, Docker), API integration, human-in-the-loop approval workflows, Discord / Google Sheets / Gmail, CRM data modelling (HubSpot / Salesforce / VinSolutions-style records)
- **Coding:** Python, JavaScript, REST APIs, Git; C/C++ & embedded (ESP32, FreeRTOS)
- **Domain:** customer-service & sales workflow automation, IoT, robotics simulation

SELECTED PROJECTS

Claude Service Inquiry Triage & Reply Assistant — *Python, Claude Messages API*

Claude workflow that classifies inbound automotive-service messages (booking / quote / parts / complaint), scores urgency, drafts an on-brand reply, and logs structured data to a CRM, with a human-approval gate for complaints and safety issues. Built a labelled eval harness and used it to tune the escalation prompt, raising human-escalation accuracy from **91% to 100%**.

Claude Lead Qualification & Follow-up Engine — *Python, Claude Messages API*

Claude workflow that qualifies inbound sales leads on a BANT rubric, assigns hot/warm/cold tiers, drafts personalised follow-ups, and outputs a prioritised call queue to a CRM. Eval-driven prompt tuning improved escalation accuracy from **75% to 100%** while holding tiering accuracy at 100%.

Hex Colony Invoice Automation (production) — *n8n, Discord, Google Sheets, Gmail*

Human-in-the-loop invoice pipeline: parse & validate a request, post a preview for Discord approval, auto-number with duplicate detection, generate a branded invoice email, send it, and log to Google Sheets with scheduled reminders. **Cut invoice creation from ~15 minutes to ~1 minute** each.

EXPERIENCE

Founder & CEO — Hex Colony

Butuan City, Philippines · Sept 2025 – Present

- Founded a technology startup delivering workflow/AI automation, IoT, and web development; **served 3 client organisations** to date.
- Lead the design and delivery of automation systems, including the production n8n invoice workflow above and Claude-based prototypes for customer service and sales.
- Run **Urbiony**, an agri-tech venture (IoT hydroponics monitoring) under Hex Colony; partnered with the Department of Agriculture and reached **national finalist** in the Young Farmer Challenge.

IoT / Firmware Developer

Project-based

- Built embedded systems on ESP32 (sensors, BLE, FreeRTOS, PCB design) and robotics simulations (MuJoCo; Unitree B2 quadruped and H1 humanoid).

TRAINING & LEADERSHIP

- Delivered hands-on technical training (IoT / Arduino) to **30 participants** in the Caraga region — comfortable teaching teammates AI and automation best practices.

EDUCATION

B.S. in Computer Engineering — Mindanao State University–Iligan Institute of Technology (MSU-IIT) · 2024
